WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

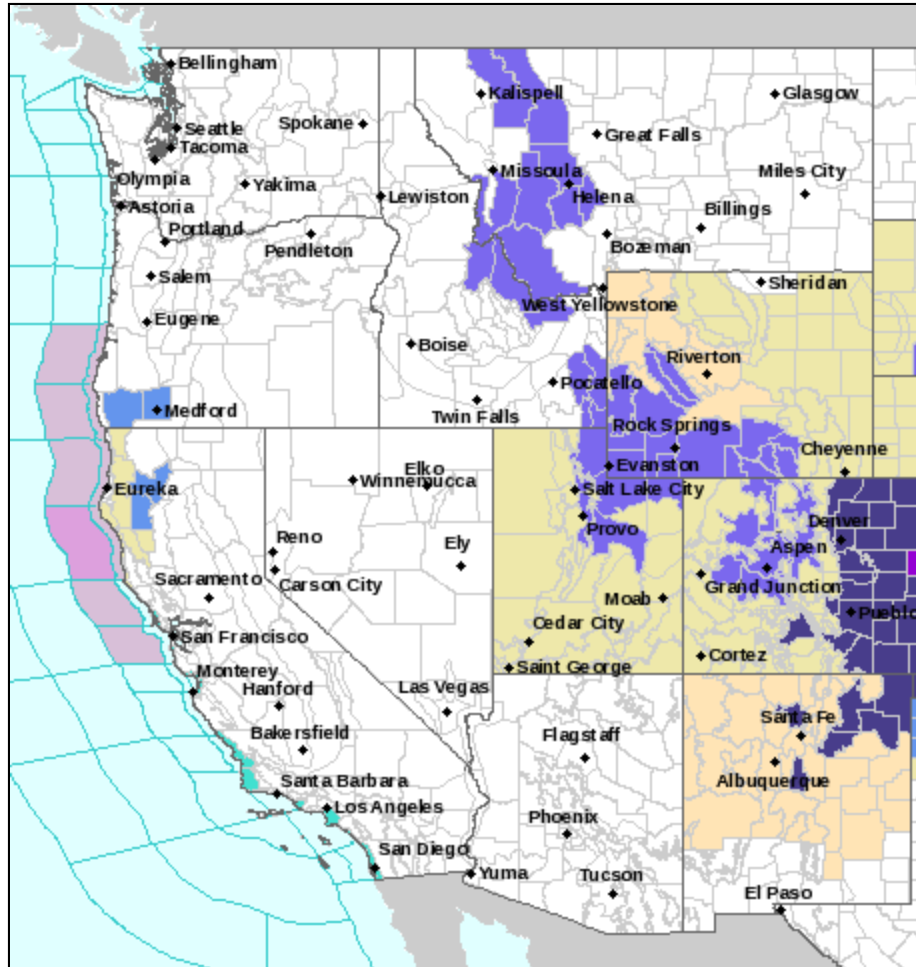

- Strong high pressure to remain centered off shore with a low pressure trough to our S or SE over the next 6 days.
- A couple of low pressure troughs pass through the western states over the next few days, outside of a few light showers possible over the northern Sierra, dry conditions will continue.
- Outside of some lingering, gusty north wind in the Sacramento Valley into midday today, winds will be lighter into Thursday at least, but increase in N to E/offshore flowing winds expected this weekend.
- Mostly clear skies prevailing next 6 days, although higher clouds expected at times.
- Afternoon high temperatures remain within 5 degrees of seasonal values, warmest inland areas mostly lower 80s next 6 days.

SOUTHERN CALIFORNIA

Cool, onshore flow will dominate the weather picture the next 2 days, resulting in an extensive marine layer cloud deck. Weak offshore flow may develop Friday into the weekend at higher elevations of Southern California, but temperatures should continue to be below normal until next Sunday or Monday when a warming trend is expected to develop. Scattered light showers will be possible in the Sierras tomorrow, but otherwise, no precipitation is expected throughout the period.

- Temperatures will remain 5 to 10 degrees below normal through Saturday, with mid 50s to mid 60s across the mountains and 70s to low 80s in the valleys. Next week, highs will return to the upper 80s in the valleys.
- Southwest winds of 15-25 mph with gusts to 40 mph can be expected over the rest of the desert tomorrow.
- Scattered showers will be possible over the Sierra tomorrow.
- Offshore winds under 25 mph will be possible Friday night into the weekend at elevations above 2,500 feet or so, but the marine layer should keep winds out of the foothills and urban interface regions.
